re: Commendation for LWC Basin #8 Project

Dear Mr. Hinderer:

VESCO Engineering is pleased to submit this formal Commendation to Adkins Machinery Movers for the excellent work you did in helping us rehabilitate Flocculation Basin #8 for the Louisville Water Company (LWC). This required you to remove rotating systems, following detailed engineering drawings, specifications, and instructions; remove and replace two large drive sprockets; carefully handle and install corrosion-coated parts; and re-install the system to the high specifications we designed into the project. Overall, this required you to do the highest quality work.

Because of your able assistance, we were able to complete this project safely, on-time, and within budget. More than that, your helpful suggestions and timely efforts enabled us to complete the installation 20% faster than normal.

Your performance was, in many ways, clearly superior to that of most of our past sub-contractors. Your fine employees demonstrated unusually good teamwork and interpersonal communication skills. They did all the required removal, assembly, and installation tasks in a highly workmanlike manner. And all of this was done with a sincere interest in employee safety, and with no accidents.

In all of these things, you exceeded our expectations, and those of the LWC. You are the kind of firm which all quality-conscious clients and engineers prize. We commend you for your excellent overall performance, and will be pleased to work with you at any time, and to recommend you to others.

Cliff Johns, President

Dan Sympton, Engineer

Ben Broderson, Engineer
